

LOCAL STORAGE

Use this application to view the current status of local disk storage, used and available.

At the Antipodes GUI, click on '**Apps**'.

Click on '**Local Storage**'.

This shows the amount of disk storage that is currently used for your music library and the amount of free space remaining.

Note that for every 1.0TB of disk storage, only 0.9TB will be reported on this screen. This is because 1 trillion bytes are counted by a computer system as only 0.9 trillion, because of the binary numbering system used in computers. For example a

computer with 2TB of storage will be reported as 1.8TB at this screen. The real capacity is about 10% larger.
